

Drilling in tough environments, with superior control

Geotechnical software specialists Keynetix and The Drilling Academy have chosen JLT as their rugged computer provider, using the equipment for their specialist borehole logging software, KeyLogbook.

KeyLogbook is an integrated solution for producing fully compliant driller's logs. It captures borehole data at source, saving time and improving data collection accuracy. The system converts logs automatically into the AGS (The Association of Geotechnical and Geoenvironmental Specialists) dataformat or PDF. This allows the user to send complete or partial information back to the office or direct to the client using the tablet PC's built in 3G/GPRS connectivity.

"Our integrated KeyLogbook system is used in all weathers and conditions for geotechnical drilling. The solution from JLT fits the bill perfectly. The touchscreen is the brightest on the market and fully adjustable for varying light conditions. The sturdy aircraft-grade aluminium casing is robust enough for use at the drilling site and drillers like the device as it is easy to use when wearing gloves", says Roger Chandler, Technical Director, Keynetix.

The team selected the Swedish designed and built IP65-rated JLT computer to run its KeyLogbook paperless borehole logging software because it offers advanced specifications for consistent outdoor use and value for money.
